Collaboration Health Assessment

May 22 – 23, 2024

- A Collaboration Health Assessment is a snapshot of how employees see collaboration working within their facility.
- All interviews will be with the Collaboration Facilitators, and will take around 30 minutes. All interviews are voluntary and all responses remain anonymous.
- In order to get a true gauge of the facility, we highly encourage maximum participation by employees.
- Questions will revolve around:
 - Collaboration awareness.
 - Workforce engagement
 - Communication within the facility.
 - Current challenges
 - Decision making
 - ATM/FACREP relationship
- We compile your responses into a report that is shared with the facility, district, and service area/region leadership. At the conclusion of our Collaboration Assessment, we will brief your ATM and FACREP on our results and we encourage them to share those findings with the workforce.

Allow your voice to be heard!
